Forward: the measurement model, from the truth to the recorded pair
True time
when it happened
Delay after its window
Clock drift
Correction steps
Window and stamp grid
Recorded time stamp
True value
what it was
Sensor error
Scale factor
Converter codes
Rounding, heaping
Recorded value
Inverse, the atlas: undo the steps whose parameters are measured, and carry the rest as a joint distribution over the true time and true value
invertible once measured
many-to-one: leaves an interval or a spread
